

# Novus Power Builds Operational Foundations with ProScope

**Implementing a scalable, expert-led operational platform to enable greater visibility, control and confidence across every project.**

## About Novus Power

Novus Power is a UK leader in high-voltage infrastructure and grid connections, delivering this scope of work for large-scale ground-mount solar and battery energy storage projects. With ambitious growth plans and a focus on turnkey delivery from design through to commissioning, it sought a solution that could support its teams, strengthen commercial control, and build a scalable business from day one.

## Client Feedback

Partnering with ProScope has been a highly collaborative and structured experience. From the beginning, their team has worked closely with ours to understand our existing processes and integrate in a way that aligns with how we operate across projects. Their responsiveness and industry knowledge have been invaluable, allowing us to bring teams together, reduce operational silos, and establish a strong foundation for managing our projects efficiently.

## Building the Right Foundations

From the outset, Novus Power recognized the importance of putting the right operational foundations in place to support its growth ambitions. Rather than relying on disconnected tools or short-term solutions, the business took a proactive approach, seeking a unified, industry-proven platform that could scale alongside its operations.

By adopting ProScope early, Novus Power has been able to align its processes with a structured, best-practice framework from day one. This approach ensures consistency across projects, strengthens commercial oversight, and provides the visibility needed to support confident decision-making as the business grows.

We are confident in the partnership we are building with ProScope and are excited to explore the full potential of the platform as we continue to grow and evolve our operations.

## The Approach: A Collaborative Partnership

ProScope worked closely with Novus Power to align the platform with its existing workflows and operational goals, ensuring a natural fit with how the business operates. From the outset, the focus was on enabling a smooth onboarding experience and equipping teams with the knowledge needed to adopt the system with confidence.

Since implementing ProScope, Novus Power has taken a more consistent and scalable approach to managing its projects, with a focus on strengthening visibility, commercial control, and coordination across key operational areas.

Adoption across teams has been straightforward, with users quickly able to operate within a more connected environment. This allowed Novus Power to start from day one with clear visibility across projects, providing a platform that can continue to support the business as it grows.

## Looking Ahead

With the right operational foundations now in place, Novus Power is well-positioned to scale efficiently while maintaining control across an expanding project portfolio.

Supported by ProScope's ongoing expertise and responsiveness, the platform will continue to evolve alongside the business, ensuring it remains aligned with both current requirements and future ambitions.

**Subcontractor Management & CIS Compliance** – Clear oversight of subcontractors, supporting accurate compliance and efficient reporting

**Materials Requisition & Procurement** – Centralized procurement processes to improve visibility and delivery timelines

**Retentions Management** – Clear tracking of client-side and subcontractor retentions through automated workflows

**Resource Management & Scheduling** – Improved workforce planning and site coordination

**Project Invoicing & Applications for Payment** – Standardized processes to strengthen commercial control and cash flow visibility

**Integration with Microsoft Teams & SharePoint** – Connecting existing tools to support day-to-day collaboration
